## Recycling of Used Products

In order to create a resource recycling society, it is necessary to use resources efficiently and reduce the amount of disposed materials. Oki Electric has set the following targets and is performing activities for the recycling of used products.

**Target** Increase the recycling rate of used products to 92% by the year 2002.

### 1. Recycling Rate of Used Products

The recycling rate of used products in FY2000 was 96.7% (sites in the Kanto region). This target was achieved before the targeted year.

Recycling rate of used products

### 2. Establishment of a Recycling Company to Disassemble Used Products

Oki Electric has been conducting a trial disassembly recycling operation in the Honjo district since 1999, to ensure that the know-how of appropriate processing of used products is utilized in the design of products.

Having established a stable operation in this area, Oki Electric transferred the operation, from FY2000, to Oki Customer Adtech Co., Ltd. (OCA), putting them in charge of maintenance services for the entire Oki Electric group companies. OCA is now engaged in a full-scale disassembly and recycling operation of used products.

### 3. Used Products Reuse Organization

In order to reduce the burden on the environment, Oki Electric has been prioritizing the reuse of used products (reuses), and has been engaged in the recycling of materials used in products that cannot be reused (resource recycling).

OCA was primarily involved with the maintenance of ATMs and the reuse of used equipment. However, since their start in the used products disassembly and recycling operation, the demand information and supply of information for used products/parts, have now been integrated into one place, making it possible for the establishment of an efficient reuse organization.
