Intake of Resources and Their Disposal into the Environment

The intake of resources, for Oki's business purposes, and their disposal of waste, are shown below:

Reduction of Industrial Waste and Reuse of Resources

Reductions in waste disposal and resource recycling are the foundations of the resources recycling society we would like to put into effect in the future.

Oki Electric has established the following reduction targets for industrial wastes (total for general wastes and industrial wastes), and activities are being conducted to achieve these targets.

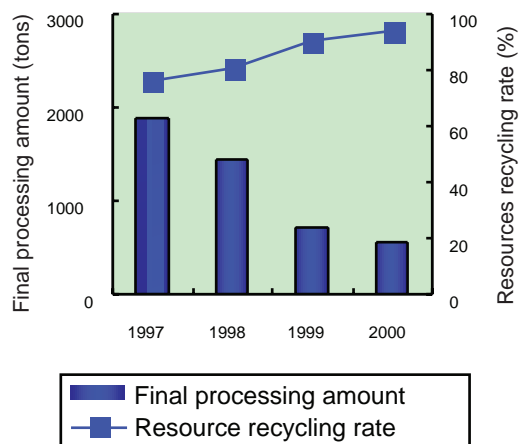

- ◆ Reduce the amount of industrial waste disposal by 70% of the total for FY1997, by the end of FY2000.
- ◆ Increase the resource-recycling rate of industrial waste materials by 90% by the end of FY2000.

1. Industrial Waste Disposal Reduction Records

The following three approaches were taken, to reduce the amount of wastes generated at production plants and offices:

- (1) Maintain a restraining control over the generation of waste disposal by reviewing and improving the production processes.
- (2) Attempts to route waste materials generated for reused and resource recycling.
- (3) All waste materials that must be disposed of are reduced in volume size in order to reduce the burden on the final waste processing plants.

As a result, the final processing amount of wastes in FY2000 was 551 tons, which is a reduction by 70.8% of the total for FY1997. The resources recycling rate reached 94%, thus both of the targets were achieved.

Industrial Waste Disposal and Resource Recycling Rates
