

# Environmental Information Disclosures

It is important, for an environmental management system, that environmental information is disclosed in a positive manner, so that opinions and feedback can be collected from all people, both within and outside the corporation and we are able to continually improve the system. For this reason, environmental information is being disclosed in various ways.

## 1. Issue of Environmental Report 2000 and Disclosure of Fiscal 2000 Environmental Accounting

Fiscal 2000 Environmental Report was made available on the Oki web site, to introduce the way in which Oki Electric is conducting environmental protection programs and activities, to the people both within and outside the company.

Both Japanese and English versions exist, and these describe the environmental policies of Oki Electric, their program and activity plans and track records, as well as how the company is conducting environmental protection programs and activities.

For FY2000, the "Environmental Accounting" of Oki Electric was also made available.

Environmental Report 2000 (1-4MB)

## 2. Inauguration of the Oki Eco Label System

An environmental label is attached to the products, in order to make it clear to customers that each particular product is an environmentally friendly product.

Oki Electric has been promoting eco-friendly products, through the implementation of product assessment. In order to publicize the results of such efforts, Oki Electric inaugurated a system to inform customers of the "eco-friendly products" by placing an "Oki Eco-friendly Product Symbol Mark" on all qualifying products.

## 3. Exhibitions and Lectures

### ■ Participation in Eco Products 2000

"Eco Products 2000" is an exhibition, which promotes information disclosure, opinion exchange, education and the motivation of activities concerning environmentally harmonious products. Oki Information Systems participated in this exhibition.

### ■ Lectures for environmental problems

Oki Engineering provided a lecture on the "sick house syndrome", an ailment of the modern day, as a part of an environmental seminar sponsored by the Nippon Environment Club.
