

Social Activities

Environmental Communication

It is important for an environmental management system to publish environmental information in a proactive manner, obtain opinions from people inside and outside of the company to improve the system and pursue environmental conservation activities based on this. For this reason, the Oki group publishes environmental information in various ways.

■ Publication of Environmental Information

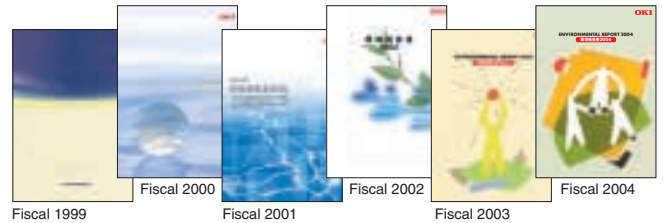

To respond to the requests of a variety of people, the Oki group publishes environmental information using the following means.

● Means of Publication of Environmental Information

Name	Oki Environmental Report	Site Environmental Report	Oki Technical Review	Environment Website	Social Contribution Website	Annual Report	Business Report	CSR Report (preliminary name)
Publisher and manager	Headquarter Global Environment Division	Site division for environmental management	Headquarter PR Division	Headquarter Global Environment Division	Headquarter Social Contribution Promotion Division	Headquarter PR Division	Headquarter General Affairs Division	Headquarter CSR Promotion Division
Frequency of publication	Once a year	Once a year	Once in three months	As required	As required	Once a year	Once a year	Once a year (due in autumn 2005)
Contents	Environmental activities of the Oki group in general	Environmental activities of a site	Matters related to environmental technology and others	Information on the environmental activities	Social contribution activities including environment-related ones	Environment-related topics	Environment-related topics	Digest edition related to the environment
Means of publication	Booklet, web	Web	Booklet, web	Web	Web	Booklet, web	Booklet, web	Booklet, web (planned)

● Publication of the Oki Environmental Report

Every year, we release an Environmental Report in order to present the Oki group's efforts for environmental conservation to people inside and outside of the company. Since the first edition for fiscal 1999, we have already released six Environmental Reports up to the edition for fiscal 2004. The reports were also published in Japanese and English language on our website (<http://www.oki.com/en/eco/>).

● Release of Site Environmental Reports

We are publishing "Site Environmental Reports" on our website (<http://www.oki.com/en/eco/>). These reports summarize the results and efforts of each site's individual and sometimes unique environmental measures. The reports introduce environmental impact data corresponding to local regulations or unique environmental efforts of each plant in detail to the residents of the region or to local communities, to seek their understanding. In fiscal 2004, Oki (Thailand) Co., Ltd., a group company manufacturing semiconductor ICs, was the first overseas site to publish such a report, so that there are now 10 sites with own reports.

● Sites Publishing Own Reports

Fiscal 2001	Fiscal 2002	Fiscal 2003	Fiscal 2004
Hachioji district Shibaura/ Makuhari district Takasaki district Honjo/Tomioka district Numazu district	Miyazaki Oki Electric Co., Ltd. Miyagi Oki Electric Co., Ltd. Oki Data Corporation (Fukushima district)	Nagano Oki Electric Co., Ltd.	Oki (Thailand) Co., Ltd.

● Presentation of "Environmental Technologies" in the Oki Technical Review

In Vol. 71 of the Oki Technical Review "Special Edition on Human Friendly Technologies," we published feature articles on environmental technologies.

The volume concretely explains nine examples, including low power-consumption LSIs - SOI device technology, design examples for heat release using the heat radiation material Cerac α° or ozone deodorization systems for semiconductor plants.

■ Concrete Efforts for Environmental Communication

● Hachioji District: Oki Environmental Seminars

In fiscal 2004, we held a seminar on measures to address special hazardous substances in April, and a seminar on environmental measures for products in November. The main sponsor of both seminars was Cyber Silkroad Hachioji, with the chamber of commerce and industry of Hachioji as a co-sponsor. In a presentation of useful cases for design and manufacturing measures against certain substances contained in products, Oki employees demonstrated our control system for chemical substances contained in products, gave lectures on the reality in eco-friendly design and technology for circuit boards with lead-free solder, as well as on other topics. The lectures gathered strong interest, and we received numerous questions from

companies that are about to start implementing measures, or companies that have difficulties in finding out how to do it.
