## Environmental Communication

### Disclosure of Environmental Information

The Oki group publishes environmental information to respond to the requests of a variety of people.

#### ●Environmental Report .....

Every year, we release an Environmental Report in order to present the Oki group's efforts for environmental conservation to people inside and outside of the company. Since the first edition for 1999, we have already released seven Environmental Reports up to the edition for 2005. The reports were also published in Japanese and English language on our website (<http://www.oki.com/jp/Home/JIS/Profile/ECO/>).

1999

2000

2001

2002

2003

2004

2005

#### ●Site Environmental Report .....

We are publishing "Site Environmental Reports" on our website (<http://www.oki.com/jp/Home/JIS/Profile/ECO/>). These reports summarize the results and efforts of each site's individual and sometimes unique environmental measures. The reports introduce environmental impact data corresponding to local regulations or unique environmental efforts of each plant in detail to the residents of the region or to local communities, to seek their understanding.

#### ●Oki Technical Review .....

In the "Seihin-ni ikiru kankyo-gijutsu shirizu" (Series: Environmental Technology Used in Products), which we are printing in the Japanese edition of our technical journal "Oki Technical Review", we give a concrete presentation of the environmental technologies that are used for the products of the Oki group.

### Environmental Seminars

#### ●Oki Environmental Seminar .....

In July 2005, we held a seminar on "Environmental Measures for Products". In a presentation of useful cases for design and manufacturing measures to respond to regulations on chemical substances contained in products, Oki employees demonstrated our control system for chemical substances contained in products, gave lectures on the reality in eco-friendly design and technology for circuit boards with lead-free solder, as well as on other topics. The lectures gathered strong interest, and we received numerous questions from companies that are about to start implementing measures, or companies that have difficulties in finding out how to do it.
