

ENVIRONMENTAL AND SOCIAL ACTIVITIES

Environmental Conservation

Oki is committed to minimizing the environmental impact of its activities. Our environmental conservation activities in fiscal 2001 included the implementation of energy conservation measures in our plants and offices as a countermeasure against global warming. The introduction of an energy-efficient cogeneration system in our semiconductor plant lowered carbon dioxide emissions from the plant by approximately 3%.

Construction of our semiconductor plant's cogeneration system was completed in fiscal 2001.

Efforts to minimize waste from our plants and offices continued to focus on "reducing, reusing and recycling." We particularly stressed waste recycling in our semiconductor plants. As a consequence, waste output companywide in fiscal 2001 was down 72.0% from fiscal 1998 levels.

We established a recycling company within the head office to recycle end-of-life products. As well as recycling, this company advises Oki's design department on ways to raise recycling rates.

We have introduced environmental accounting to accurately assess the results and costs and enhance the efficiency of environmental conservation activities.

As part of our environmental information disclosure, we have made the results available in our 2000 Environmental Report, which can be seen on our web site at:

<http://www.oki.co.jp/OKI/Home/English/Profile/index.html>.

Our activities have enabled us to meet the goals for energy consumption, carbon dioxide

emissions, waste reduction and product recycling stated in OKI Eco Plan 21, our fiscal 2000 environmental action plan.

In another example, the TUV Rheinland Product Safety GmbH (TRPS), an affiliate of the TUV Rheinland/Berlin-Brandenburg, has awarded the TUV ECO Circle 2000/2001 quality and environmental test mark to Oki Systems (Deutschland) GmbH for its new digital C7000- and C9000-series LED color printers. This is the first award for color non-impact printers in the world.

Contributing to Community Well-Being

In fiscal 2001 the Oki Group donated a blood transport vehicle to the Japan Red Cross Society. This vehicle will be used to transport donated blood safely to hospitals. The Group has been donating such vehicles for five years, an achievement made possible by monthly donations of ¥100 per employee.

We are also participating in the "2000 Picture Books Campaign" run by the Association for Sending Picture Books to Lao Children (ASPB). Even in the Laotian capital Vientiane, bookstores are few and opportunities for children to become familiar with the world through picture books are limited. ASPB donates Japanese picture books with Lao translations inserted. On July 15, 2000, Oki Group volunteers prepared 33 such books and sent them to the ASPB.

In other activities, volunteers from Oki Data Americas provided assistance with interior painting services for the Moorestown Ecumenical Neighborhood Development, Inc., a local United Way Agency. This social service organization provides temporary housing for people unable to afford their own housing.

Oki Electric donated a blood transport vehicle to the Red Cross Society.

Oki Group volunteers prepared picture books with Lao translations and sent them to the ASPB.
