

Profile

Founded in 1881 by Kibataro Oki, Oki Electric Industry Co., Ltd. was Japan's first manufacturer of telecommunications equipment. Driven by its progressive spirit, Oki has cultivated its ability to develop new technology and has continued to grow in step with the evolution of information and telecommunications technologies. The Oki Group has strengths in the fields of information systems, telecommunications and electronic devices that set it apart from other manufacturers, and in recent years it has used those strengths to supply unique products and services. With the ongoing development of broadband and IP* networking environments, Oki is actively working to bring about the convergence of information and telecommunications technologies. To that end, it has been operating under a new business segment oriented structure since the fiscal year ending March 2006. Oki aims to contribute to the realization of the "e-society" by staying true to its corporate vision "Oki, Network Solutions for a Global Society." Specifically, this vision entails individuals being able to communicate "the desired information in the right format, wherever, whenever, and with whomever, safely, reliably and at an appropriate price."

* Internet Protocol

*The "e-Society"

Oki defines the "e-society" as a society where a wide range of information is being exchanged beyond time and space over global networks, which breaks down the boundaries among countries, regions and cultures, allowing individuals to take part in various social activities in an impartial, secure way.
