Version 5.0 October 1st, 2025

Banned substances

These are chemical substances prohibited from being contained in product components and packaging components. If they are contained, we will not purchase them in principle. Regardless of the revision date of this document, these substances include those revised by laws and treaties, and unless otherwise specified, they will be prohibited substances from the date of commencement of regulations by laws and treaties. However, if the OKI Group permits inclusion, or if the OKI Group specifies substances or thresholds in drawings, specifications, etc., such substances or thresholds shall take precedence. Furthermore, if the product falls under the exempted items of the RoHS Directive and other laws and regulations, the inclusion of the product is permitted. Packaging parts used for products delivered to the OKI Group are excluded if they are discarded or collected after delivery and there is no risk of migration or contamination of prohibited substances into the contents due to contact.

If a banned substance is contained even though there is no report in the response, and we incur damages because of it, we may be held liable for contractual non-conformity based on the contract with our suppliers. Even if the supplier is a trading company, the supplier is required to guarantee the content concentration, content, and other information in its response based on the contract.

Examples of packaging components in deliverables are shown in “Table 1. Examples of Packaging Parts”.

Reportable substances

Chemical substances whose content in product parts and packaging parts (intended use, usage area, concentration, etc.) are to be reported. Substances subject to reporting that overlap with Banned substances are treated as Banned substances. Regardless of the revision date of this document, these substances include those revised by laws and treaties, and unless otherwise specified, they will be reportable substances from the date of commencement of regulations by laws and treaties. Packaging parts used for products delivered to the OKI Group are excluded if they are discarded or collected after delivery and there is no risk of migration or contamination of reportable substances into the contents due to contact.

Chemical substances that are not reported in the survey responses from suppliers are considered to be below the thresholds. If a reportable substance is contained even though there is no report in the response, and we incur damages because of it, we may be held liable for contractual non-conformity based on the contract with our suppliers. Even if the supplier is a trading company, the supplier is required to guarantee the content concentration, content, and other information in its response based on the contract.

Reportable substances may be designated as prohibited substances in the future, so please consider alternative preparations if they are contained.
