C650dn

*What we liked:*

- An extremely compact machine, given its powerful features. It is about half the size of its market segment competitors.
- The frontal access makes maintenance very easy. All consumables are readily accessible, and even the drums and fuser unit can be swapped out without calling for technical support.
- A highly productive machine, responding fast to changes of print media, different types of paper etc.
- Both the print driver and the machine's configuration webpage are full of features, and proved very easy to use.
- It will perform extremely well in busy work environments as it is able to handle multiple print requests without slowing down.
- Print quality is very good, particularly of photographs and gradients. Using high quality settings does not hamper productivity.
- Even higher productivity can be obtained from the bypass than from the paper tray – an advantage for a machine with a wide range of uses.
