

## Universal Print Driver

### Manage multiple printer devices via one single driver

OKI's Universal Print Driver has been developed to simplify the task of managing multiple printer devices via one single driver. OKI's Universal Print Driver allows users to have quicker and easier access to any OKI PCL 5 supported printer or MFP on the network. Therefore, if a printer is out of use, users can access uninterrupted printing by using an alternative device without the hassle of installing a new printer driver.

This results in less helpdesk calls and less pressure on your IT department as the need to install or uninstall new printer drivers will be a thing of the past.

#### Key Features

- Toner save
- Auto tray change
- 2-Up to 16-Up
- Secure print with PIN access\*
- Store job to printer\*
- Watermarks
- Driver settings saved
- Staple & punch finishing (if finisher installed)

\* Hard Disk Drive or SD card required for some models

# Universal Print Driver

A wide range of features and options such as secure print, multiple print resolutions, duplex printing and various finishing modes are available to provide more flexibility to the user.

Driver interface

## Time and cost saving

- One common user interface for all supported printers
- Easy to use graphics interface
- Managing drivers is easier for IT managers, no training required
- No uninstall/install required when changing printers
- Good solution for MPS business
- One driver for colour and mono devices

The OKI Universal Printer Driver works with a wide range of OKI printers and MFPs, see table below.
