* Available in 2017
¹Requires optional Metascan enabler ²Using optional SENDYS Explorer connectors ³Network Card Reader required for Pull Printing

Built-in – The solution is part of the device's standard features. No additional installation is required. The equipment simply needs to be configured so the user can access the full benefits.
Software and utilities – Desktop software provided with the device at no additional cost. These powerful tools enhance the value of the MFP to the organisation by extending its capability beyond the device.
Integrated Solutions – OKI's sXP is a web services based architecture which allows the seamless integration of your OKI smart MFP with many business applications and solutions.

OKI's smart solutions form an integrated suite of software, technologies and tools that work with OKI's devices to enhance print and document workflow, management and security.

Through the use of partner solutions with OKI's smart MFPs we are able to extend your document processes, ensuring a fully-integrated and optimised solution that meets the needs and objectives of your business, whether office-based, mobile or in the cloud.

OKI's Office Solutions can be categorised into five key business challenges:

Capture and Distribution

The digitisation of documents can assist companies who face challenges with limited physical storage space. Converting to paperless workflows with instant electronic access and incorporating automated routing rules can help eliminate wastage whilst saving on time and cost. Optical Character Recognition (OCR) adds further value by converting scanned documents into fully searchable electronic text which can be edited, saved into an archival format or distributed and indexed.

Document and Content Management

Time-consuming, routine manual document processes can be better streamlined through the customisation of automatic workflows. Users are commonly demanding to scan with metadata added directly to a central repository or the Cloud, additionally the access and retrieval of specific information to or from a mobile device or smart MFP must be within a secure and robust environment.

Security and Output

Programming an MFP with secure access such as PIN or ID Card can prevent the loss of sensitive information which can be costly and a high risk for any organisation. By enforcing output policies, such as pull-printing, print jobs can only be released following a physical action by a user, therefore avoiding unwanted print and limiting wastage.

Mobility and BYOD

Today's mobile workforce is now able to print wirelessly while on the go from any laptop, tablet, or smartphone. This need for on demand access means Smart devices must offer a functionality to print conveniently and securely from a mobile device.

Device and Contract Management

A device management tool can provide full visibility of print activity and help manage contracts and agreements more proactively with partners. Efficiencies can be further improved through real-time monitoring of device usage, toner consumption, energy levels and notifications of service and maintenance alerts, all aimed to eliminate down time.
