

THE KEY ROLE OF DECENTRALIZED PRINTING IN THE NEW WORKPLACE

As companies plan for a future in which social distancing measures will need to be implemented in the workplace, printers will need take on the added role of providing flexibility. Benefits of decentralized printing:

- Takes printing away from central office point (copy room) into smaller workgroups
- Decentralized MFP solutions improve productivity by enabling functions such as document scanning to be completed closer to the workspace
- Provides flexibility needed for workspaces to continue to change
- Additional paper trays can be added to increase capacity and media sizes available, thus requiring fewer interactions and touches

OKI Data is uniquely situated to help your business implement decentralized printing. Not only have we been building and supporting cost-effective, industrial-grade printers for over 40 years, we also understand the challenges and demands of the office workspace, regardless of industry.

Companies that can implement decentralization of their printing process will jump ahead in terms of safety and setting the foundation for enduring success.

OKI printers also make mobile device printing easy. All OKI mobile device compatible printers integrate with AirPrint®, OKI Mobile Print app for Android® and Google Cloud Print™ services, and there is no software required. This gives employees and guests the ability to seamlessly work from anywhere in your office space, making them more productive.

If you have more complex printing needs, OKI has software-based offerings that address issues such as:

- Connecting mobile devices to multiple subnets
- Secure print release
- Secure guest access
- Print accounting and data encryption
